

# ASHRAE 188P

## Are you ready?

In early 2012, ASHRAE is expected to adopt Standard 188P: Prevention of Legionellosis Associated with Building Water Systems.

This new standard will have an immediate impact on building designers, owners, managers, and insurers. It mandates specific risk management practices that require building water systems to be consistently operated and maintained to minimize the risk of Legionellosis. Facility managers and owners must assemble a risk management team, develop a site-specific risk management plan, and validate the plan through routine monitoring and record keeping.

The adoption of ASHRAE 188P will increase accountability for safeguarding building water systems. Everyone owning or operating industrial or commercial building water systems will be affected.

### CNYSHE MEETING

December 8, 2011  
11:30am - 1:00pm

Maplewood Inn  
400 7<sup>th</sup> North Street  
Liverpool, NY 13088

Free to all ASHE members
